

Don Kasun Gallage

FULL STACK ENGINEER

PROFILE

Full Stack Engineer with 6+ years of experience building things people actually use. Most of my work has been in **React**, **React Native**, **Next.js**, **Node.js**, **Redux**, **AWS Lambda**, and backend integrations, with enough **Python**, **Kotlin**, **Swift**, **Firebase**, **Supabase**, **MongoDB**, **PostgreSQL**, **Redis**, **Express**, and **AI SDKs** to get the job done when the app needs more than one layer. I've built live products, open-source tools, and a few messy prototypes that only got better after I took them apart and rebuilt the bits that mattered.

EXPERIENCE

Full Stack Engineer Jan 2025 – Present
Freelance · Colombo, Sri Lanka

- Collaborated with UK university researchers to build a PDF data-extraction POC using Python and AI SDKs, integrated into an existing React web application.
- Refactored AI-generated React Native prototypes for startup clients, restructuring codebase architecture to improve long-term maintainability and code quality.
- Built a gamified football training app for youth athletes in React Native, including an interactive drill-tracking feature from scratch.

Full Stack Engineer — Mobile and Web Jan 2023 – Dec 2024
Speer Technologies Inc · Toronto, Canada

- Built and shipped cross-platform mobile apps in React Native, adding native modules in Kotlin and Swift where the product needed platform-specific behavior or tighter device integration.
- Worked on a mental health app that first needed tablet support, then grew into knowledge base pages, video player sections, journal feature improvements, and onboarding updates.
- Helped build a rental property management app for apartment buildings and multiplex locations, developing features like smart-lock access and repair requests in Kotlin and Swift before the product evolved into a fully native resort management app with amenity booking and payments.
- Also contributed to shorter projects across web and mobile, including Auth0 authentication work, a fleet management app for a car rental service, a ride-hailing app, and fixes for a podcast app.

Software Engineer — Node.js Jan 2021 – Aug 2022
Gapstars, Sri Lanka · Harver, Netherlands (remote)

- Worked on the integration team connecting ATS platforms to Harver through AWS Lambda, supporting the data flows behind candidate onboarding and assessment workflows.
- Extended existing integrations and built new ones for newly onboarded clients, making sure each implementation matched the client's ATS structure and business requirements.
- Monitored production integrations, fixed bugs, and paired with teammates to deliver changes smoothly while working closely with the business team in the Netherlands.

SKILLS

- Languages**
- JavaScript
 - TypeScript
 - Kotlin
 - Swift
 - Python
 - Java

- Databases**
- PostgreSQL
 - Supabase
 - MongoDB
 - Firebase
 - MySQL
 - Redis

- Frameworks & Libraries**
- React
 - React Native
 - Next.js
 - Node.js
 - Redux
 - Redux-Saga
 - React Navigation
 - Express

- Cloud & Infrastructure**
- AWS
 - Lambda
 - Serverless
 - Google Cloud Platform

- AI / ML**
- Vertex AI
 - Gemini
 - Llama
 - AI SDK (JS and Python)

EDUCATION

Graduate Certificate, Project Management in IT
Seneca College, Ontario, Canada
2022 – 2023

B.Sc. (Hons) in Information Technology
University of Moratuwa, Sri Lanka
2015 – 2019

Senior Software Engineer — React Native

Sep 2020 – Jan 2021

Lanka Solutions Pvt Ltd · Axiata Digital Labs, Sri Lanka

- Was outsourced to Axiata Digital Labs to build an internal React Native mobile app for sales representatives at a telecom provider in Nepal within the Axiata group.
- Built features used by field teams, including OCR capture, GPS-based workflows, and supporting screens for day-to-day sales operations.
- Worked closely with backend and QA teams to deliver updates and keep the app stable for internal users.

Intern Software Engineer → Software Engineer → Senior Software Engineer

Sep 2017 – Apr 2018

Nov 2018 – Sep 2020

Nuclei Technologies Pvt Ltd, Sri Lanka

- Led delivery across multiple React and React Native products, including a localised dating app, banking and loyalty workflows, and other client-facing features. Managed a team of 6 to 8 developers, mentored two interns, and worked directly with clients and cross-functional teams.
- Built and maintained a Java OCR application used to scan documents and grade SAT test papers, then improved Android POS functionality with Bluetooth printer connectivity and device integration.
- Started on React Native mobile apps for a restaurant product and a sports-stat application, then expanded into production feature work across mobile and web as the role grew.

📁 SELECTED PROJECTS

BYOBSL.com

Designed and developed a production Next.js platform for discovering BYOB restaurants in Sri Lanka. I concentrated on SEO-first listings, map-based search, curated event content, and admin workflows. I also handled Firebase authentication and Supabase-backed data management to keep the product reliable and easy to scale.

byobs.com

Ollamadock

Native macOS menu bar app for checking which Ollama models are loaded in GPU memory. It shows a quick status view, lets you load or stop models, and can start Ollama when it is not running. Basically a GUI version of `ollama ps`.

github.com/donkasun/ollamadock

react-native-outlined-text

Open-source React Native component born from fixing Android text-shadow issues in a real app. It uses SVG layering to combine outline and shadow effects cleanly, with TypeScript support and cross-platform rendering that behaves consistently on iOS and Android.
